

XLR8Developer for Integrated Web Development

Management is expecting web applications that can be written as fast and bug free as their current applications, then there is only one tool that can do this for you and it is called XLR8Developer. XLR8Developer is a plug-in for open source Eclipse integrated development environment. Why use XLR8Developer?

Speed. This tool generates complete HTML/JavaScript for your application allowing instant access by users. It is fully tested for use with IE, Firefox, Safari, or Chrome saving you time. When developing forms, this tool is already snapping your fields to grid allowing programmers spend less time designing forms. Our XLR8Object Editor understands U2 databases you can have data entry forms in seconds that use virtual fields and data fields without redefining you data for the web while saving you potentially hours of work.

Debugging. Built into this product is a full debugging tool. You can set the level of debugging up to 3 levels at the for code level while it builds a individual log for each programmer/user. With our U2WebLink™ middleware you can set the debugging for any of 8 levels using open source Apache log4j.

Security. Built into this product is form level and prompt level security. Additionally, there is a complete audit trail of all form access and database updates/deletes. All transactions can be rolled back.

Now you know. Check out our other tools such the Basic Editor called XLR8Editor at www.u2logic.com.
